

I am very concerned that BPL will interfere with other licensed services, including Amateur Radio and Emergency services such as FEMA.

Another concern I have is that as Amateurs we may interfere with the operation of BPL. It seems that approval of BPL has a two pronged down side, either of which could be a major problem.

Since a significant body of experience from other countries suggest that BPL does produce unacceptable levels of interference, it would seem to me, prudent to disallow it in favor of some other means of providing data networking. Thankyou, Dave gauger
